

Practice Partner EMR and Dragon® NaturallySpeaking® Medical

Seamless Integration enables faster, more efficient and profitable clinical documentation

Benefits

- Dictate faster and more accurately than ever before
- Dictate anywhere in Practice Partner
- Eliminate transcription costs
- Spend more time with patients
- Dictate in your own words
- Support higher reimbursement and reduce denials
- Improve clinician satisfaction

Practice Partner Patient Records

Practice Partner® Patient Records is an award-winning electronic medical record (EMR) designed to help you do more for your patients with less effort. Proven to work for thousands of practices nationwide, Practice Partner Patient Records has helped practices of all sizes improve bottom line productivity and quality of care.

Seamless Integration with Dragon NaturallySpeaking Medical

Dragon® NaturallySpeaking® Medical, from Nuance, is the leader in speech recognition software with over 80,000 clinician users in the U.S. and is directly integrated to Practice Partner Patient Records. Dragon NaturallySpeaking Medical and Practice Partner work together eliminating the need for a physician to navigate within screens of the EMR or chart a patient visit using a keyboard or tablet pen. Dragon NaturallySpeaking Medical allows physicians to dictate in their own words, generating documentation directly into Practice Partner EMR, which they can then edit and review. Dragon NaturallySpeaking Medical is 99% accurate and includes medical vocabularies covering nearly 80 medical specialties and subspecialties.

In addition, Practice Partner and Dragon NaturallySpeaking Medical have a unique integration that allows physicians to populate the entire chart from one single screen progress note. This feature frees the physician from having to update all pertinent areas of the chart because Practice Partner does it automatically. Furthermore, that data, such as all major problems and allergies, can then be quickly searched and reported on for quality measures, such as Pay-for-Performance. This unique relationship saves the physician time, enabling more time to be spent caring for patients.

Key Features and Benefits

Dragon NaturallySpeaking Medical lets physicians dictate faster and more accurately than ever before, which means physicians and office staff will spend little or no time correcting dictation. Dragon NaturallySpeaking Medical offers virtually instant response time, saving physicians valuable minutes in their day - no more waiting for transcribed reports or need for typing into Practice Partner EMR.

Quality and Productivity Benefits

Increased accuracy means fewer errors to correct, which lets clinicians spend more time with patients, improving both quality of care and patient satisfaction.

Dragon NaturallySpeaking Medical's free-text dictation capability support more detailed History of Present Illness, more flexible Review of Systems, and more descriptive Assessment and Plan - the "medical decision-making" aspects of the note - which give referring physicians and ancillary providers a clearer and more detailed assessment and prognosis.

Dragon NaturallySpeaking Medical reduces the time spent documenting care in an EMR using speech-driven navigation and narrative dictation.

Dragon NaturallySpeaking Medical is 99% accurate. More complete, accurate documentation improves coding effectiveness and provides richer detail per patient, giving physicians greater confidence to code at higher levels.

About Nuance Communications, Inc.

Nuance's healthcare portfolio offers proven, speech-enabled clinical documentation and communication solutions including Dragon Medical 10 for real-time medical speech recognition within an EMR, the eScription on-demand platform for computer aided medical transcription (CAMT), the Dictaphone Enterprise Speech System on-premise platform for integrated transcription workflow and speech recognition, and radiology solutions including PowerScribe® for Radiology, RadWhere™ for Radiology, RadPort™ for Radiology, RadCube™ for Radiology, and Veriphy™ critical test results management.
